PHYSICAL IMPROVEMENTS

The following report covers the more important improvements and reconditioning projects to buildings and grounds during the Fiscal Year July 1, 1940, to June 30, 1941. In addition to the items mentioned, there were, as usual, a vast number of minor, more or less routine, tasks which were completed in the operation and maintenance of the Home.

GROUND

Roads

The paving on Milwaukee Avenue and Wright Avenue was completed to include 293 cubic yards of black top. This corresponds to about three city blocks of three inch bituminous material. The curbs and gutters were completed the previous year.

Sidewalks

New sidewalk was constructed in front of the hospital from the entrance to cottage No. 506. Another section of sidewalk was laid from the bakery corner to the coal storage on east side of power house totaling 350 square feet.

Cemetery entrance

Two field stone monuments were erected bearing bronze plates to carry the name of the cemetery. These are backed by two flag poles. Curb and gutter were laid and the entrance graded. The picture was completed by landscaping with five foot pines and sod.

BUILDINGS

Painting

One of the major projects completed in the late summer and fall of 1940, was the painting of metal roofs with green graphite paint. The roofs on the following buildings were included: Hospital Annex, Harnden, Houston, Bryant, Roberts, Griffin, Fairchild, Chapel, Barber Shop, Truck Garage, Amusement Hall, Paint Shop, Furniture Shop, Carpenter Shop, Post Office, Headquarters Office, Gardeners Work Shop, the residences of the Commandant, Utility Officer, Senior Surgeon and Surgeon, cottages 112, 124, 216, 225, 226, 227 and 229. This places these roofs in first class condition of maintenance.

Exterior painting during this Fiscal Year was secondary to interior and roof painting. However, the following buildings were completed: Griffin Hall, Roberts Hall, Amusement Hall and the north side of the Hospital Annex.

With the help of the W.P.A., the painters reconditioned the interiors of Marston and Marden Halls, several rooms in the Hospital, cottages 109, 122, 221, 226, 312 and residence 101, the first floor of the warehouse and other minor jobs.

PHYSICAL IMPROVEMENTS-Continued

A step forward in the proper storage of food in kitchens was made by the removal of the old type icebox and the installation of modern electric refrigerators in the Bryant, Hospital Annex and Fairchild Halls. The box in Marston Hall had been replaced the year before and the Hospital has always had an electric refrigerator. This eliminates all iceboxes in the five kitchens at the Home.

Fairchild Hall

The kitchen of Fairchild Hall was the only remaining kitchen which had not been reconditioned during the past ten years. This kitchen is now in first class condition as the metal ceiling and plaster has been replaced with wallboard, a new floor has been laid in the kitchen and pantry, a reinforced concrete slab has been made for the kitchen range, new cupboard have been constructed in the kitchen and pantry and new dish washing tubs installed.

The stairs for the steel fire escape on the west side of this building were moved away from the building to avoid snow and ice from the eaves in winter.

Hospital Annex

A set of four new modern shower stalls were installed in a room prepared for this use in the men's ward, first floor.

"Hobby Shop"

A large project was undertaken by the State and W.P.A. men to provide a "Hobby Shop" for the activities of the members of the Home. The space under the east wing of the Hospital Annex was excavated, new stone foundations were constructed below the frost line. Windows on the east wall were of sufficient length to provide ample daylight. Partitions were set for the division of the shop into one large work space and a sewing room with additional storage space for materials and donations. A toilet room was also completed. Grade entrances, of sufficient size, were made.

Marden Hall

Room 22 was reconditioned to include new walls and ceiling and interior trim.

Residence of Utility Officer No. 104

The living room, dining room, bedroom and front hall on the first floor were reconditioned to include removal of cracked and loose plaster from wall and replacing the same, leveling and replacing floors, modernization of electric wiring and redecorating.

Residence of Supply Officer No. 505

Two bedrooms and bath were redecorated.

Cottage No. 109

The interior of this cottage was reconditioned to include removal of cracked and loose plaster on walls and ceiling and replacing same, the replacing of interior trim, modernization of electric wiring and redecorating and refinishing of floors.

PHYSICAL IMPROVEMENTS-Continued

Cottages No. 122, 411 and 312

Cupboards were added to cottages 122 and 411 and cottage 312 was reconditioned to serve as a barracks for six men members.

Utility Office

The Transportation and Construction office was moved from the northeast corner of the Power House building to an office made ready for the purpose in the truck garage. The Transportation Office was remodelled and reconditioned for use as the Utility Office and this made available space for the Adjutant's Office in headquarters and placed the Utility Officer and Transportation Foreman closer to their activities.

Water Plant

A wet lime feeder tank was installed in the water purification plant to improve the control of the water treatment, thus avoiding variations in hardness which were common in dry feeders.

Laundry

Three laundry presses were installed to do away with hand ironing and to increase production with the increase of membership. The new machines included a shirt boyd press and a collar and cuff press, a set of sleeve forms and a "mushroom" press for yokes of dresses.

A large platform scale used to weigh out loads of soiled clothing for the washers was set in a pit level with the floor to eliminate continual lifting. Grates were installed around the soap tank.

Power Plant

It became necessary to remove the two Hawley Down Draft furnaces from boilers 3 and 4 because of deterioration of circulating tubes and cracked headers. These furnaces were replaced with "Kelley" hand fired shaker grates in order to continue the boilers in operation. In connection with this work, it was necessary to rebuild the arches and brickwork of the boiler settings.

Well

A well was driven down to a depth of 103 feet to furnish water for members who prefer hard water with a trace of iron for drinking purposes rather than tap water from the filter plant softened to 4.5 grains. A small electric pump unit in a pit brings the well water to a bubbler and faucet for filling containers.

Transportation

To keep tires properly inflated, an air compressor was purchased and mounted for use in the truck garage.

Furniture Shop

The W.P.A. labor and mason crew excavated for foundations below the frost line for the furniture shop, making a very serviceable basement as a part of the project. To provide a finishing room for furniture repair, a connecting link of frame construction was made between the furniture and carpenter shops.

PHYSICAL IMPROVEMENTS-Continued

Fire Department

The Grand Army Home Fire Department, made up of 35 regular employees, received a 40 foot extension ladder and a new "fog" nozzle in payment for its efforts in answering fires in neighboring rural and resort areas adjacent to the Home grounds. Rollers were made for mounting this ladder on any of the Transportation Department trucks.

Warehouse

The first floor of the warehouse, where miscellaneous plumbing, electrical and hardware supplies are kept, was reconditioned and painted.

Storage space

A section of Marston Hall basement was set aside as storage room for warehouse furniture, etc. A new concrete floor was laid and picket fence provided for this purpose.

Radio Amplifier

Power amplification was added to the radio system which picks up Chapel services. Portable microphone and improved stationary units made it possible for patients in the Hospital and Hospital Annex to hear the entire service without interruption. Cabinets containing outlets were installed in the Amusement Hall and band stand so that the amplifiers can be moved to these locations for programs originating there.
